Scenario Commentary

A +25% Roll Rate shock changes transition dynamics. Via PD Elasticity (1.50), Expected Loss shifts by +2,948, moving EL from 7,859 to 10,807. NPL is reported separately as a forward-looking portfolio quality indicator (1.47) and is not directly fed into the EL uplift calculation on this page.

Segment Sensitivity Matrix

Relative sensitivity within selected filters. Shock= +25% (percentile-based colors)

	Ampelokipoi	Holargos	Nea Smyrni	Neo Psychiko	Paleo Faliro	Pangrati
PD Elasticity	0.75	1.67	0.95	1.39	1.86	4.61
